SUMMARY

Full-Stack Software Engineer with 4+ years of experience building production SaaS systems across Laravel/PHP, Vue/Angular, Go services, AWS SQS workflows, Amazon API integrations, dashboards, and data pipelines. Strong in backend-heavy product work where integrations, asynchronous processing, reliability, and business-critical workflows meet.

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer - BidX GmbH 07/2023 – Present | Darmstadt, Germany

Develop and maintain production SaaS systems across the core Laravel/Vue platform, Go and PHP middleware services, internal dashboards, and operational tooling. Work across backend, frontend, integrations, asynchronous processing, data pipelines, and production reliability.

- Built and improved scheduling automation, including Schedule V1/V2 workflows, queue-based execution, AWS SQS dispatching, worker processing, cron/supervisor configuration, execution windows, logging, and rollout fixes.
- Worked on Amazon Selling Partner API and Amazon Advertising integrations, including order/report ingestion, SKU/product data, total sales, ClickHouse insertion paths, ACOS/sales factor logic, and data quality fixes.
- Delivered internal dashboard and admin tooling for client, agency, DSP, ASIN, profile, notification, scheduling, feature, and support workflows.
- Improved production reliability through error handling, deployment scripts, environment configuration, logging, Sentry-related fixes, PHPStan/Rector cleanup, and production hotfixes.
- Implemented frontend workflow improvements across Vue and Angular, including localization, search, pagination, loaders, forms, previews, and reporting interfaces.

Full Stack Developer - Cobrowser (acquired by Conversation24) 03/2022 – 06/2023 | Netherlands (Remote)

Worked on subscription, payment, shopping cart, e-commerce integration, and data security features in a Symfony/Angular-based platform.

- Developed and maintained subscription plans, payment flows, shopping cart features, and payment-link functionality.
- Integrated API2Cart to synchronize external e-commerce systems with the platform.
- Implemented encryption and decryption for sensitive database data using PHP/Symfony and Angular.
- Added product preset functionality for Facebook Catalog and WhatsApp-based customer workflows.
- Wrote and maintained unit and integration tests using PHPUnit, Jest, and Karma.
- Supported production hotfixes and ongoing feature development across frontend and backend areas

EDUCATION

B.S. Information Technology, Eastern Mediterranean University 09/2018 – 02/2022 | Famagusta, Cyprus

Bachelor of Science in Information Technology from Eastern Mediterranean University, graduated with Honors.

SKILLS

Backend

PHP, Laravel, Symfony, Go, Node.js

Cloud & Operations

AWS SQS, Docker, cron, supervisor, deployment scripts, logging, Sentry

Integrations

Amazon Selling Partner API, Amazon Advertising API, API2Cart, payment providers

Tools

Git, GitHub/Bitbucket, CI/CD, REST APIs, Postman

Frontend

Vue.js, Angular, React, JavaScript, TypeScript

Databases & Data

MySQL, MariaDB, MongoDB, ClickHouse, SQL

Testing & Quality

PHPUnit, Jest, Karma, PHPStan, Rector, unit testing, integration testing

LANGUAGES

English: C1 | German: A1
