SUMMARY

Full-Stack Software Engineer with 4+ years of experience building production SaaS systems across Laravel/PHP, Vue/Angular, Go services, AWS SQS workflows, Amazon API integrations, and data pipelines. Experienced in backend-heavy product development, asynchronous processing, third-party integrations, and production reliability.

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer - BidX GmbH

07/2023 – Present | Darmstadt, Germany

Develop and maintain production SaaS systems across the core Laravel/Vue platform, Go and PHP middleware services, internal dashboards, and operational tooling.

- Built and optimized scheduling automation (V1/V2) with queue-based execution and AWS SQS, reducing missed executions by 60% and broken automation setups by 90%.
- Optimized Amazon Selling Partner API data processing, increasing report coverage from 3 to 60 days per client and enabling reliable processing of up to 4 GB of XML data per client.
- Built internal support and admin tooling that streamlined feature enablement, manual fixes, and data corrections, improving support speed and operational reliability.
- Strengthened production reliability through improved error handling, deployment tooling, monitoring, and static analysis, reducing recurring operational issues and accelerating incident diagnosis.
- Improved Vue and Angular workflows across localization, search, pagination, forms, and reporting, delivering a faster and more reliable user experience.

Full Stack Developer - Cobrowser (acquired by Conversation24)

03/2022 – 06/2023 | Netherlands (Remote)

Worked on subscription, payment, shopping cart, e-commerce integration, and data security features in a Symfony/Angular-based platform.

- Developed and maintained subscription plans, payment flows and shopping cart features.
- Identified and resolved a subtle recurring bug causing repeated payment failures, eliminating a persistent production issue that had resisted previous fixes and refactoring.
- Implemented AI-powered real-time translation for live chat operators, enabling seamless communication across languages.
- Integrated API2Cart to synchronize external e-commerce systems with the platform.
- Added product preset functionality for Facebook Catalog and WhatsApp-based customer workflows.
- Wrote and maintained unit and integration tests using PHPUnit, Jest, and Karma.

EDUCATION

B.S. Information Technology, Eastern Mediterranean University

09/2018 – 02/2022 | Famagusta, Cyprus

Bachelor of Science in Information Technology from Eastern Mediterranean University, graduated with Honors.

SKILLS

Backend

PHP, Laravel, Symfony, Go, Node.js

Cloud & Operations

AWS SQS, Docker, cron, supervisor, deployment scripts, logging, Sentry

Integrations

Amazon Selling Partner API, Amazon Advertising API, API2Cart, payment providers

Tools

Git, GitHub/Bitbucket, CI/CD, REST APIs, Postman

Frontend

Vue.js, Angular, React, JavaScript, TypeScript

Databases & Data

MySQL, MariaDB, MongoDB, ClickHouse, SQL

Testing & Quality

PHPUnit, Jest, Karma, PHPStan, Rector, unit testing, integration testing

LANGUAGES

English: C1 | German: A1
